

John McCarthy, Elizabeth Miesner, John D. Spengler

Ph.D., Associate Professor, Harvard School of Public Health
(Spengler)

Spengler is an environmental physicist and has published numerous articles on indoor and outdoor air pollution. He directs the Harvard Six-Cities Study, which is an on-going study of airborne pollutants in six U.S. cities. He has authored papers on particulate measurements and ETS, and he conducts an annual seminar on Indoor Air Quality at Harvard. Spengler is an outspoken critic of smoking and ETS. He is currently under investigation by the NIH for falsifying data from the Six-Cities Study. (see attached article).

John McCarthy and Elizabeth Miesner are associates, perhaps graduate students, under Spengler at Harvard. McCarthy has published one article on ETS (with Spengler); Miesner has no publication record.
